

The Bebop design is the result of Novemal's commitment to innovation and quality. The Bebop has been created with these objectives of offering an excellent level of performance and comfort.

The bebop ensures a practical use for the end-user:

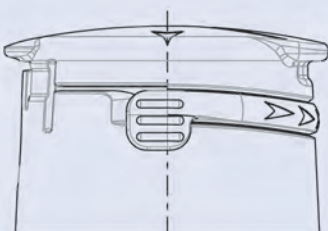

- Easy to use for both "on the go" or at home
- Opening with one hand is possible
- Obvious and total security ensured by the tamper evident band. A facility to retain the band has been included into the closure designed in order to respect the environment (patented)
- Guaranteed hygiene with a cover that remains fixed to the container
- Re-sealing is ensured both visually and audibly

The Bebop, with the same advantages as the standard screw-cap, handles perfectly in the fillers equipment:

- A closure that fits all the existing pre-forms
- Produced with organoleptic material
- A wide range of colours available to carry more impact for your flavoured waters or to meet your companies colours

Technical details:

- A 1 piece closure, lighter than the classic sport caps
- Injection moulded and snaps on to the container. Complete with hinge to retain the cover and offer a good drink experience for the consumer
- Different diameter of rings
- A tamper-evident band insuring the maximum security
- A 240° opening (patented) offering a good drink experience for the consumer

Novemal is the specialist in the design, conception and production of plastic closures. With more than 50 years of experience, Novemal is one of the market leaders of caps and closures systems for liquid food products worldwide. Products are produced and supplied from one of our 4 factories in Europe, 2 in North America or our joint-venture in Japan. All the factories are certified ISO 9001.

We always consider the environment when selecting the raw materials and the production process.
